

MUHAMMAD ADITIA FARHAN

Software Engineer

Jakarta, Indonesia | Phone: (+62)82219126940 | Email: aditiafarhan25@gmail.com

SUMMARY

Experienced **Software Engineer** with 5 years of hands-on experience building and scaling **web and mobile applications** across **healthcare, logistics, e-commerce, and telecommunications** sectors. Combines strong technical expertise — **React, Next.js, Laravel, Kubernetes, RESTful APIs, GraphQL** — with proven leadership in **project management, sprint planning, backlog prioritization, stakeholder communication, and risk mitigation**.

Demonstrated success in **driving end-to-end product delivery**, aligning technical execution with business objectives, and mentoring cross-functional teams to deliver high-quality, performant solutions. Passionate about **continuous learning**, adopting modern technologies, and improving engineering practices to elevate team efficiency and product impact.

EXPERIENCE

PT. Pertamina Bina Medika IHC – Jakarta, Indonesia

Frontend Engineer (Dec 2023 – Mar 2024), Software Engineer (Apr 2024 – Present)

- **Led the development and maintenance of a nationwide Hospital Information System (HIS) and Electronic Medical Record (EMR) platform**, supporting corporate and subsidiary hospitals across Indonesia.
- Designed and implemented the **core clinical flow for inpatient EMR**, covering patient admission, initial assessment, diagnostic orders and results, treatment and nursing documentation, progress monitoring, discharge summaries, and post-care follow-up.
- **Standardized and deployed the EMR system across 12+ hospitals**, handling thousands of inpatient and outpatient transactions daily.
- **Architected hybrid deployments** (cloud and on-premise), ensuring high scalability, performance, and reliability in diverse hospital environments.
- Made **key architectural decisions** balancing scalability, maintainability, and delivery speed.
- **Optimized CI/CD pipelines** using Jenkinsfile and Dockerfile, accelerating build speed, deployment reliability, and release consistency.
- **Facilitated sprint planning, technical discussions, and architecture reviews** to ensure effective team execution.
- **Bridged communication** between clinical, product, and engineering teams to align goals and delivery timelines.
- **Mentored team members**, led code reviews, and supported onboarding and hiring to strengthen engineering quality.
- Drove continuous improvement through **performance optimization, dependency upgrades, and production stability efforts**.
- Authored **comprehensive technical documentation** for new features, deployments, and architectural updates to support knowledge sharing.
- Spearheaded major **technical initiatives** including:
 - **Feature flag integration (Unleash)** for flexible and safe feature rollouts.
 - **Storybook adoption** to enforce design-system consistency in UI components.
 - **Phase Console setup** for streamlined deployment management across environments.
- Integrated core infrastructure components:
 - **MinIO** for secure, high-availability object storage and medical record archiving.
 - **HashiCorp Vault** for centralized secrets management and secure configuration handling.

OrderOnline.id – Bandung, Indonesia

Frontend Engineer (Jan 2023 – Nov 2023)

- Developed **OEXpress** and **Ologi**, logistics tracking web apps enabling SMEs and enterprises to manage deliveries, track shipments, and monitor revenue.
- Designed and implemented **reusable components, helper functions, and frontend foundations** to enhance development scalability.
- Introduced:
 - **Feature flagging** for improved development and testing workflows.
 - **Storybook** for component documentation and design alignment.
 - **API contract standardization** to streamline backend-frontend collaboration.
- Collaborated across teams to resolve bugs, refactor code, and upgrade dependencies.

- Provided **technical guidance**, **PR reviews**, and maintained **clear documentation** for feature releases.
- Initiated **on-call rotations** to improve reliability and team responsiveness.

Orami by SIRCLO – Tangerang, Indonesia
Frontend Engineer (Oct 2021 – Dec 2022)

- Contributed to key modules for:
 - **Ibusibuk Resellers** – e-commerce app for resellers to browse, purchase, and promote products.
 - **Ibusibuk Brand** – dashboard for brands to manage campaigns and communications.
 - **Ibusibuk Influencers** – app connecting influencer moms with brand partnerships.
- Built **scalable, reusable base components**, implemented **unit tests**, and improved long-term maintainability
- Led **bug resolution, refactoring, and library upgrades**, ensuring product stability.
- Collaborated cross-functionally, delivering **PR reviews** and **technical feedback** to elevate frontend quality.

PT Nexwave - Huawei – Jakarta, Indonesia
Frontend Engineer (Oct 2020 – Oct 2021)

- Developed a **telecommunications analytics dashboard** providing real-time insights for senior leadership.
- Delivered requested features, resolved bugs, and ensured production reliability through active collaboration.

PT Bejana Investidata Globalindo – Bandung, Indonesia
Frontend Engineer Intern (July 2019 - November 2019)

- Built an **internet data usage dashboard** with features for usage tracking, package purchase, and account management.
- Collaborated with developers to deliver new features, fix bugs, and enhance user experience.

EDUCATION

Bandung State Polytechnic
Bachelor of Applied Science (B.A.Sc.), Informatics Engineering
2016 – 2020 | GPA: 3.43 / 4.00

SKILLS

- Project & Team Management
Sprint planning • Backlog prioritization • Cross-functional collaboration • Stakeholder alignment • Risk management • Performance monitoring • Feature delivery oversight • Code review coordination • Team mentoring • Engineer onboarding • Technical interviews • Team capacity planning
- Frontend Frameworks & Libraries
React.js • Next.js • Vue.js • Redux • Zustand • Vuex • Pinia • TypeScript • JavaScript (ES6+) • Tailwind CSS • SCSS • Styled Components • Material-UI • Ant Design • Bootstrap • HTML5 • CSS3 • Storybook • WebSockets • Web Workers
- Backend, API & Databases
Laravel (PHP) • Django (Python) • Express.js • RESTful APIs • GraphQL • Unleash (feature flags) • Phase Console (deployment management) • PostgreSQL • MySQL
- Infrastructure & Tools
Docker • Kubernetes • Jenkins (CI/CD) • Git • API contracts • Cloud and on-premise deployment • Agile (Scrum) methodology
- Key Initiatives & Practices
Scalable architecture design • Feature flag integration • Design system implementation • Reusable component libraries • Performance optimization • Unit testing • Developer enablement • Documentation best practices • Continuous improvement • Cross-team alignment
