

MUHAMMAD ADITIA FARHAN

Software Engineer

Jakarta, Indonesia | Phone: (+62)82219126940 | Email: aditiafarhan25@gmail.com

SUMMARY

Software Engineer with 5+ years of experience designing, building, and scaling enterprise-grade web applications across healthcare, logistics, e-commerce, and telecommunications sectors. Lead engineer behind nationwide Hospital Information System (HIS) and Electronic Medical Record (EMR) platforms deployed across 12+ hospitals, supporting thousands of daily clinical transactions.

Expertise in full-stack development (React, Next.js, Laravel, TypeScript, PostgreSQL), system architecture, healthcare interoperability, and cloud-native infrastructure (Docker, Kubernetes, CI/CD). Experienced in hybrid cloud and on-premise deployments, enterprise system standardization, and large-scale data integration.

Recognized for driving architectural decisions, leading technical discussions, mentoring engineers, and aligning technology delivery with business and operational objectives. Focused on building scalable, resilient systems that support high-volume enterprise operations.

EXPERIENCE

PT. Pertamina Bina Medika IHC – Jakarta, Indonesia

Software Engineer (Apr 2024 – Present), Frontend Engineer (Dec 2023 – Mar 2024)

Nationwide Hospital Information System (HIS) & EMR Platform

- Lead development and continuous enhancement of a nationwide Hospital Information System (HIS) and Electronic Medical Record (EMR) platform deployed across 12+ corporate and subsidiary hospitals.
- Design and implement end-to-end inpatient clinical workflows, including admission, assessment, diagnostic orders, results management, treatment documentation, nursing records, progress notes, discharge summaries, and follow-up care.
- Standardize EMR implementation across hospitals, supporting thousands of inpatient and outpatient transactions daily.
- Architect hybrid cloud and on-premise deployment strategies to ensure scalability, high availability, and performance across diverse hospital infrastructures.
- Drive key architectural decisions balancing scalability, maintainability, regulatory compliance, and delivery velocity.
- Optimize CI/CD pipelines using Jenkins and Docker to improve build efficiency, release consistency, and deployment reliability.
- Implement feature flag architecture (Unleash) to enable controlled rollouts and reduce production risk.
- Establish Storybook-based design system to enforce UI consistency and scalable frontend architecture.
- Integrate MinIO for secure medical document archiving and HashiCorp Vault for centralized secrets management.
- Facilitate sprint planning, architecture reviews, and technical design discussions.
- Mentor engineers, conduct code reviews, and support onboarding and hiring initiatives.
- Collaborate with clinical, product, and operational stakeholders to align system capabilities with healthcare workflows.
- Author technical documentation covering architecture, deployment strategies, and feature implementation.

IHC Office – Enterprise Secretariat Application

- Develop enterprise secretariat platform supporting corporate administrative workflows and operational coordination.

- Design backend services using Laravel and PostgreSQL following RESTful architecture principles.
- Build frontend modules using Next.js and TypeScript.
- Containerize services using Docker and orchestrate deployments with Kubernetes.
- Maintain automated CI/CD pipelines using Jenkins to ensure stable and repeatable release cycles.

HCIS – Human Capital Information System

- Develop centralized Human Capital Information System (HCIS) for employee master data management and corporate reporting.
- Design and implement APIs enabling internal system integration and data governance.
- Ensure data validation, integrity, and consistency across enterprise systems.
- Deploy and manage containerized services using Docker and Kubernetes.

SATUSEHAT Integration Interface

- Develop an interoperability interface to transmit patient data from multiple IHC hospitals to Indonesia's national health platform.
 - Implement standardized healthcare data transformation pipelines in compliance with national interoperability requirements.
 - Integrate legacy hospital databases (including Sybase) with modern REST-based services.
 - Ensure secure, reliable containerized deployment using Docker and Kubernetes.
 - Maintain high data accuracy and synchronization reliability across distributed healthcare systems.
-

OrderOnline.id – Bandung, Indonesia

Frontend Engineer (Jan 2023 – Nov 2023)

- Developed OEXpress and Ologi logistics web applications enabling SMEs and enterprises to manage deliveries, track shipments, and monitor revenue.
 - Designed scalable frontend architecture and reusable component libraries.
 - Introduced feature flagging and Storybook to improve development workflows and UI documentation.
 - Standardized API contracts to streamline backend-frontend collaboration.
 - Led bug resolution, dependency upgrades, and performance optimization initiatives.
 - Initiated on-call rotation to enhance system reliability and incident response.
-

Orami by SIRCLO – Tangerang, Indonesia

Frontend Engineer (Oct 2021 – Dec 2022)

- Developed and enhanced multiple e-commerce and partnership platforms, including reseller systems, brand dashboards, and influencer management applications.
 - Built reusable base components and improved frontend architecture maintainability.
 - Implemented unit testing and strengthened code quality standards.
 - Led refactoring initiatives and dependency upgrades to maintain long-term product stability.
 - Collaborated cross-functionally to deliver scalable features aligned with business objectives.
-

PT Nexwave - Huawei – Jakarta, Indonesia

Frontend Engineer (Oct 2020 – Oct 2021)

- Developed telecommunications analytics dashboard delivering real-time insights for senior leadership.

- Delivered production-ready features, resolved critical issues, and ensured high system reliability.

PT Bejana Investidata Globalindo – Bandung, Indonesia

Frontend Engineer Intern (July 2019 - November 2019)

- Built internet data usage dashboard including usage tracking, package purchasing, and account management modules.
- Collaborated with senior developers to deliver new features, resolve issues, and enhance user experience.

EDUCATION

Bandung State Polytechnic

Bachelor of Applied Science (B.A.Sc.), Informatics Engineering

2016 – 2020 | GPA: 3.34 / 4.00

SKILLS

Engineering Leadership

Sprint planning • Technical design review • Architecture discussions • Cross-functional alignment • Stakeholder communication • Code reviews • Mentorship • Engineering documentation • Risk mitigation • Production stability

Frontend

React • Next.js • TypeScript • JavaScript (ES6+) • Redux • Zustand • Vue.js • Tailwind CSS • SCSS • Styled Components • Ant Design • Material UI • Storybook • WebSockets

Backend & Integration

Laravel (PHP) • Django • Express.js • RESTful APIs • GraphQL • Healthcare interoperability • API contract design • Feature flags (Unleash) • PostgreSQL • MySQL • Sybase

Infrastructure & DevOps

Docker • Kubernetes • Jenkins • CI/CD pipelines • Hybrid cloud deployment • On-premise deployment • MinIO • HashiCorp Vault • Git • Agile (Scrum)

Architecture & Practices

Scalable system design • Enterprise system standardization • Hybrid deployment strategy • Design system implementation • Performance optimization • Dependency management • Master data governance • Continuous improvement
